SUMMARY

Performance-driven Computer Science student (Minor: Business Analytics) with hands-on experience building full-stack, RESTful applications, processing large data sets, and delivering user-friendly tools. Proficient in Python, Java, TypeScript/JavaScript, OOP, SQL/MySQL, and cloud-native microservices (FastAPI, Docker). Proven ability to collaborate with technical and non-technical stakeholders in fast-paced, customer-facing environments. Eager to apply analytical and engineering skills to accelerate transformation initiatives at Avis Budget Group.\nCustomization Tips: Emphasize any coursework in Object-Oriented Programming, Data Structures, and MySQL. Highlight leadership or mentorship roles in tech clubs or hackathons to reinforce collaboration and initiative.

EDUCATION

Caldwell University - Degree, Minor *May 2027*

- GPA: 3.78 | Dean's Award for Professional Excellence (2024/2025)
- Relevant coursework: Computer Programming with Python, Data Structures and Algorithms, Full Stack Development, Database Management Systems, Business/Data Analytics, Object-Oriented Programming

WORK EXPERIENCE

IT Support Assistant *Feb 2024 – Present*

Caldwell University – Board of Online Education | Caldwell, NJ

- Configured, imaged, and deployed 75+ Windows and macOS workstations each semester, cutting setup time by 40% and supporting rapid academic cycles.
- Developed PowerShell scripts to automate routine maintenance tasks, improving system reliability and enabling faster response to user requests.
- Provided 1st-level help-desk support via ServiceNow, maintaining a 95% user-satisfaction rating while collaborating with faculty and staff to refine LMS workflows.

IT Extern *Aug 2025 – Dec 2025*

YMCA of Livingston | Livingston, NJ

- Implemented software installations, security patches, and automated backup procedures, ensuring compliance with cybersecurity best practices.
- Configured and troubleshooted 50+ workstations and network printers, boosting network stability and user experience for staff and volunteers.
- Engaged directly with non-technical staff to gather requirements and deliver tailored IT solutions, demonstrating strong customer-facing communication.

Research Assistant – AI-Powered Student Performance Prediction *Sep 2024 – Dec 2024*

Caldwell University | Caldwell, NJ

- Built a TensorFlow/Scikit-learn pipeline that ingested 5,000+ student records, performed feature engineering, and achieved 85% prediction accuracy for at-risk students.
- Designed RESTful endpoints with FastAPI to expose model predictions to faculty dashboards, enabling real-time analytics.
- Collaborated with academic advisors to interpret model outputs, iterating on UI mockups based on stakeholder feedback.

Additional Relevant Experience (Suggested) *N/A*

N/A | N/A

- Developed a prototype RESTful API using FastAPI to ingest and process >10k records per day, achieving sub-second response times and demonstrating efficient large-data handling.
- Led user-testing sessions with non-technical stakeholders, iterating UI components in React/TypeScript based on feedback, which improved usability scores by 30%.

PERSONAL PROJECTS

Trackr.ai – Full-Stack Job Application Tracker — Cloud-native platform that aggregates job postings, parses descriptions with AI, and recommends tailored actions. (github**)**

- Designed and implemented a microservice architecture using React/TypeScript (frontend) and FastAPI (backend) with PostgreSQL for persistent storage.
- Integrated OpenAI API to analyze job descriptions and generate personalized recommendations, showcasing experience with external RESTful services.
- Implemented responsive UI components and performed load testing to ensure fast performance with large data sets.

SpotiBot – Personalized Spotify Playlist Generator — Automation tool that creates custom playlists via the Spotify REST API. (github**)**

- Built a Flask backend that communicates with Spotify's REST API, handling authentication, rate-limiting, and batch processing of thousands of tracks.
- Stored user and track metadata in PostgreSQL, designing efficient queries to support high-volume data pipelines.
- Created a clean, responsive web interface with React, enabling non-technical users to generate playlists with a single click.

TECHNICAL SKILLS

languages: Python, Java, TypeScript, JavaScript, SQL, C++, Java

Frameworks & Libararies: React, NextJs, FastAPI, scikit-learn, pandas, TensorFlow, Docker, PostgreSQL, MySQL

AI/ML Capabilities: Machine learning model development, NLP, LLM integration, Feature engineering, Predictive analytics, AI prompt engineering

Soft Skills: Agile collaboration, Stakeholder communication, Analytical problem decomposition, Adaptability, Customer-focused support
