SUMMARY

Performance-driven Computer Science student (Minor: Business Analytics) with hands-on experience building full-stack, data-intensive applications using Python, Java, and TypeScript/JavaScript. Proven ability to design RESTful services, create responsive user interfaces, and optimize MySQL-backed pipelines for fast analytics. Strong collaborator who thrives in fast-paced, customer-facing environments, translating stakeholder feedback into scalable tools that improve operational efficiency—exactly the mindset Avis Budget Group seeks in its Accelerate Transformation Engineer Intern.

EDUCATION

Caldwell University - Degree, Minor *May 2027*

- GPA: 3.78 | Dean's Award for Professional Excellence (2024/2025)
- Relevant coursework: Computer Programming with Python, Data Structures and Algorithms, Full Stack Development, Database Management Systems, Business/Data Analytics, Object-Oriented Programming, Web Development with JavaScript/TypeScript

WORK EXPERIENCE

IT Support Assistant *Feb 2024 – Present*

Caldwell University – Board of Online Education | Caldwell, NJ

- Engineered automated imaging scripts (Python) to deploy 75+ Windows and macOS workstations each semester, cutting setup time by 40% and supporting rapid onboarding of faculty and students.
- Developed a lightweight RESTful ticket-tracking dashboard (FastAPI + React) that visualized ServiceNow data, improving first-level support response visibility and contributing to a 95% user-satisfaction rating.
- Collaborated with professors and non-technical staff to gather UI requirements, iteratively refining tools for a seamless LMS experience and reducing support tickets by 25%.

IT Extern *Aug 2025 – Dec 2025*

YMCA of Livingston | Livingston, NJ

- Implemented security patches and automated backup workflows (Bash/Python) across 50+ workstations, ensuring data integrity and compliance with cybersecurity standards.
- Created a responsive internal portal (HTML5, CSS3, JavaScript) for staff to request equipment, decreasing request processing time by 30% and enhancing stakeholder engagement.
- Provided on-site technical support to volunteers and visitors, translating technical concepts into clear guidance, reinforcing a customer-focused service culture.

Research Assistant – AI-Powered Student Performance Prediction *Sep 2024 – Dec 2024*

Caldwell University | Caldwell, NJ

- Designed and trained a TensorFlow-based predictive model (Python, scikit-learn) on 5,000+ student records, achieving 85% accuracy in identifying at-risk learners.
- Built a RESTful API (FastAPI) to serve model predictions to a web dashboard, enabling faculty to access real-time analytics with sub-second latency.
- Presented findings to academic stakeholders, gathering feedback that guided feature engineering improvements and increased model interpretability.

PERSONAL PROJECTS

Trackr.ai – Full-Stack Job Application Tracker — Cloud-native platform that ingests job postings, applies AI analysis, and recommends tailored application actions. (github**)**

- Implemented a microservice architecture with React/TypeScript front-end and Python FastAPI back-end, persisting data in PostgreSQL and exposing RESTful endpoints for AI-driven insights.
- Integrated OpenAI LLM via API to parse job descriptions and generate customized bullet points, demonstrating end-to-end AI prompt engineering and rapid prototyping.

SpotiBot – Personalized Spotify Playlist Generator — Automation tool that creates custom playlists based on user preferences using the Spotify API. (github**)**

- Built a Flask service that authenticates with Spotify, processes large music libraries, and stores metadata in PostgreSQL for scalable playlist generation.
- Designed responsive UI with React, enabling users to trigger playlist creation with a single click and view real-time progress.

TECHNICAL SKILLS

languages: Python, Java, JavaScript, TypeScript, SQL, C++, Java

Frameworks & Libararies: React, Next.js, FastAPI, scikit-learn, pandas, TensorFlow, Docker, PostgreSQL, MySQL

AI/ML Capabilities: Machine learning model development, NLP & LLM prompt engineering, Feature engineering, Predictive analytics, RESTful API integration for AI services

Soft Skills: Agile collaboration, Stakeholder communication, Analytical problem solving, Adaptability in fast-paced environments, Customer-focused support
