SUMMARY

AI-native Computer Science student (Minor: Business Analytics) with hands-on experience building AI-enhanced full-stack applications, predictive models, and automation tools. Passionate about applying large-language-model workflows (Claude, Codex, Cursor) to solve fintech challenges, prototype innovative features, and accelerate fixed-income trading platforms. Proven ability to self-direct research, deliver production-grade code, and communicate insights across technical and business teams.

EDUCATION

Caldwell University - B.S. Computer Science, Minor in Business Analytics *Expected: May 2027*

- GPA: 3.78 | Dean's Award for Professional Excellence (2024/2025)
- Relevant coursework: Computer Programming with Python, Data Structures and Algorithms, Full Stack Development, Spreadsheet Application, Database Management Systems, Business/Data Analytics

WORK EXPERIENCE

IT Support Assistant *Feb 2024 – Present*

Caldwell University – Board of Online Education | Caldwell, NJ

- Automated deployment of 75+ Windows and macOS workstations each semester using scripting, cutting setup time by 40% and freeing capacity for rapid prototyping of internal tools.
- Developed a PowerShell-based ticket triage bot that leveraged LLM prompts to suggest first-line solutions, reducing average resolution time by 25% and improving user-satisfaction to 95%.
- Collaborated with faculty to integrate AI-driven analytics dashboards into the LMS, providing real-time engagement metrics that informed course design.

IT Extern *Aug 2025 – Dec 2025*

YMCA of Livingston | Livingston, NJ

- Implemented automated security-patch pipelines and backup routines using Python scripts, ensuring compliance with cybersecurity best practices.
- Configured and troubleshooted 50+ workstations and network printers, introducing a lightweight monitoring agent that alerted on performance anomalies, improving network stability.
- Created a small internal chatbot powered by an LLM (OpenAI GPT) to answer common IT questions, decreasing help-desk volume by 15%.

Research Assistant – AI-Powered Student Performance Prediction *Sep 2024 – Dec 2024*

Caldwell University | Caldwell, NJ

- Designed and trained a TensorFlow + Scikit-learn pipeline that achieved 85% accuracy in identifying at-risk students from a dataset of 5,000+ records.
- Engineered feature-extraction scripts that leveraged LLM-based text summarization to incorporate unstructured student feedback, boosting model recall by 7%.
- Documented the end-to-end AI workflow and presented findings to academic stakeholders, demonstrating clear communication of technical results.

PERSONAL PROJECTS

Trackr.ai – AI-Enhanced Job Application Tracker — Full-stack platform that uses LLM prompts to parse job descriptions and generate tailored application recommendations. (github**)**

- Built microservice architecture with React/TypeScript frontend and FastAPI backend, persisting data in PostgreSQL.
- Integrated Claude-style prompt engineering via REST API to automatically extract key skills from postings and suggest resume edits.
- Implemented unit and integration tests, achieving 90% code coverage and ensuring production-grade reliability.

SpotiBot – Automated Playlist Generator — Automation tool that leverages the Spotify API and LLM-driven recommendation logic to create personalized playlists at scale. (github**)**

- Developed Flask service that orchestrates data pipelines processing millions of tracks, stored in PostgreSQL.
- Applied prompt engineering to a language model for dynamic playlist curation based on user mood descriptors.
- Deployed Docker containers to AWS, demonstrating cloud-native scalability.

TECHNICAL SKILLS

languages: Python, TypeScript, JavaScript, SQL, C++, Java

Frameworks & Libararies: React, Next.js, FastAPI, Flask, scikit-learn, pandas, TensorFlow, Docker, PostgreSQL

AI/ML Capabilities: Large-language-model prompt engineering (Claude, Codex, Cursor), Machine learning model development & evaluation, Predictive analytics, NLP & text summarization, AI-driven automation and workflow optimization

Soft Skills: Intellectual curiosity, Proactive problem solving, Collaborative agile teamwork, Effective communication with technical and non-technical audiences, Entrepreneurial mindset
