SUMMARY

Motivated Computer Science student with a strong foundation in Java, Spring Boot, and RESTful API development, seeking the Summer Software Engineering Internship at Gen. Proven ability to design clean, testable, and maintainable backend services, containerize applications with Docker, and document APIs for cross-functional teams. Experienced in agile collaboration, data-driven problem solving, and leveraging AI tools to accelerate development. Passionate about cybersecurity, digital freedom, and delivering high-impact solutions for millions of users.

EDUCATION

Caldwell University - Degree, Minor *May 2027*

- GPA: 3.78 | Dean's Award for Professional Excellence (2024/2025)
- Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming in Java, Database Management Systems, Software Engineering, Web Development, Business/Data Analytics

WORK EXPERIENCE

IT Support Assistant *Feb 2024 – Present*

Caldwell University – Board of Online Education | Caldwell, NJ

- Automated deployment of 75+ Windows and macOS workstations each semester using PowerShell scripts, cutting setup time by 40% and documenting the process in Confluence for team reuse.
- Developed Java utility scripts to batch-process course enrollment data, reducing manual data-entry effort by 30% and improving data accuracy.
- Maintained and updated internal RESTful API documentation for LMS integrations, ensuring consistent communication between front-end portals and backend services.
- Collaborated with faculty and IT staff in agile sprint ceremonies, prioritizing tickets in ServiceNow and achieving a 95% user-satisfaction rating.

Research Assistant – AI-Powered Student Performance Prediction *Sep 2024 – Dec 2024*

Caldwell University | Caldwell, NJ

- Engineered a data pipeline in Python and SQL to ingest and clean 5,000+ student records, then exposed the processed data via a Flask-based RESTful API for downstream analytics.
- Implemented model versioning and automated testing using Docker containers, enabling reproducible experiments and faster iteration cycles.
- Authored clear technical documentation and API specs (OpenAPI) that facilitated collaboration with non-technical stakeholders and accelerated project onboarding.

PERSONAL PROJECTS

Trackr.ai – Full-Stack Job Application Tracker — Microservice-style platform for tracking job applications with AI-driven recommendation engine. (github**)**

- Designed and documented RESTful API endpoints (OpenAPI) using FastAPI; later refactored core services to Java Spring Boot for production readiness.
- Containerized all services with Docker and orchestrated local development with Docker Compose, ensuring consistent environments across team members.
- Implemented CI/CD pipelines with GitHub Actions that run unit and integration tests, enforce code quality, and automatically deploy to a cloud sandbox.

SpotiBot – Personalized Spotify Playlist Generator — Automation tool that creates custom playlists via the Spotify API. (github**)**

- Built a Flask backend that communicates with Spotify's RESTful API, handling OAuth flows and rate-limited requests.
- Stored user and track metadata in PostgreSQL, writing optimized SQL queries to support high-volume playlist generation.
- Wrote comprehensive API documentation and unit tests, and containerized the application with Docker for easy deployment.

TECHNICAL SKILLS

languages: Java, Python, JavaScript, TypeScript, SQL, C++
Frameworks & Libararies: Spring Boot, FastAPI, React, Next.js, Docker, PostgreSQL, JPA, scikit-learn, TensorFlow
AI/ML Capabilities: Machine learning model development, Predictive analytics, Feature engineering, AI prompt engineering
Soft Skills: Agile collaboration, Effective communication, Analytical problem solving, Adaptability
