SUMMARY

Enthusiastic Computer Science junior with a Business Analytics minor, specializing in full-stack web development and data-driven solutions. Proven ability to build responsive React front-ends, robust Python FastAPI back-ends, and PostgreSQL databases, complemented by experience with Docker, CI/CD pipelines, and RESTful API integration. Strong communicator who thrives in fast-paced, collaborative environments and is eager to apply technical expertise to healthcare technology at Omnicom Health.

EDUCATION

Caldwell University - B.S. Computer Science, Minor in Business Analytics *Expected: May 2027*

- GPA: 3.78 | Dean's Award for Professional Excellence (2024/2025)
- Relevant coursework: Data Structures and Algorithms, Full Stack Development, Database Management Systems, Business/Data Analytics, Software Engineering, Web Development

WORK EXPERIENCE

IT Support Assistant *Feb 2024 – Present*

Caldwell University — Board of Online Education | Caldwell, NJ

- Collaborated with faculty to deploy and maintain LMS platforms, reducing technical support tickets by 25% and improving user satisfaction.
- Configured, imaged, and deployed over 75 Windows and macOS workstations each semester, cutting setup time by 40% through automated scripting.
- Resolved first-level ServiceNow tickets with a 95% satisfaction rating, demonstrating strong troubleshooting and communication skills.

IT Extern *Aug 2025 – Dec 2025*

YMCA of Livingston | Livingston, NJ

- Executed software installations, security patches, and automated backup routines across 50+ workstations, ensuring compliance with cybersecurity standards.
- Diagnosed and repaired network and printer issues, boosting system uptime by 15% for staff and volunteers.
- Documented procedures in Confluence and used Git for version control of configuration scripts, supporting team knowledge sharing.

Research Assistant — AI-Powered Student Performance Prediction *Sep 2024 – Dec 2024*

Caldwell University | Caldwell, NJ

- Designed and trained TensorFlow and scikit-learn models to predict at-risk students, achieving 85% accuracy on a dataset of 5,000+ records.
- Implemented data pipelines for preprocessing and feature engineering, reducing model training time by 30%.
- Presented findings to academic stakeholders, translating technical results into actionable recommendations.

PERSONAL PROJECTS

Trackr.ai – Full-Stack Job Application Tracker — Cloud-native platform for managing job applications with AI-driven recommendations. (github**)**

- Developed a microservice architecture using React/TypeScript front-end and Python FastAPI back-end, with PostgreSQL for persistent storage.
- Integrated OpenAI API to analyze job descriptions and generate tailored recommendations, showcasing AI-enhanced feature development.
- Containerized services with Docker and set up GitHub Actions CI/CD pipeline, enabling automated testing and deployment.

SpotiBot – Personalized Spotify Playlist Generator — Automation tool that creates custom Spotify playlists via the Spotify REST API. (github**)**

- Built a Flask API that interacts with the Spotify REST API, handling authentication and playlist creation at scale.
- Designed PostgreSQL schemas and data pipelines to manage user and track metadata for thousands of songs.
- Deployed the application on AWS Elastic Beanstalk using Docker, ensuring high availability and performance.

TECHNICAL SKILLS

languages: Python, JavaScript, TypeScript, SQL, C++, Java

Frameworks & Libararies: React, Next.js, FastAPI, Flask, scikit-learn, pandas, TensorFlow, Docker, PostgreSQL

AI/ML Capabilities: Machine learning model development, Predictive analytics, Feature engineering, NLP, AI prompt engineering

Soft Skills: Agile collaboration, Effective communication, Problem solving, Attention to detail, Time management
