SUMMARY

AI-driven software engineer and Computer Science student (Minor: Business Analytics) with hands-on experience building full-stack applications and machine-learning models. Proven ability to prototype AI-enhanced features, automate workflows, and translate complex data into actionable insights. Passionate about fintech innovation, proactive problem solving, and delivering high-energy collaborative solutions. Seeking to apply AI-native development skills (Python, TypeScript, Claude-style code generation) as an AI Development Intern at Trumid.

EDUCATION

Caldwell University - B.S. Computer Science, Minor in Business Analytic *Expected: May 2027*

- GPA: 3.78 | Dean's Award for Professional Excellence (2024/2025)
- Relevant coursework: Computer Programming with Python, Data Structures and Algorithms, Full Stack Development, Spreadsheet Application, Database Management Systems, Business/Data Analytics

WORK EXPERIENCE

Research Assistant — AI-Powered Student Performance Prediction *Sep 2024 – Dec 2024*

Caldwell University | Caldwell, NJ

- Developed a TensorFlow and Scikit-learn pipeline that predicted at-risk students with 85% accuracy, showcasing end-to-end AI model creation.
- Engineered data preprocessing and feature-engineering workflows for 5,000+ records, reducing model training time by 30%.
- Documented findings and presented actionable insights to faculty, demonstrating clear communication of AI results to non-technical stakeholders.

IT Support Assistant *Feb 2024 – Present*

Caldwell University — Board of Online Education | Caldwell, NJ

- Configured, imaged, and deployed 75+ Windows and macOS workstations each semester, cutting setup time by 40% and enabling rapid onboarding of new users.
- Managed LMS course setups for faculty, decreasing technical support tickets by 25% through proactive troubleshooting and documentation.
- Resolved 1st-level help-desk tickets via ServiceNow with a 95% satisfaction rating, emphasizing strong customer-focused communication.

IT Extern *Aug 2025 – Dec 2025*

YMCA of Livingston | Livingston, NJ

- Implemented automated software installations, security patches, and backup routines, improving data integrity and compliance.
- Configured and troubleshooted 50+ workstations and printers across multiple departments, boosting network stability and user productivity.
- Collaborated with cross-functional staff to streamline IT processes, embodying a norm-challenging mindset.

PERSONAL PROJECTS

Trackr.ai – Full-Stack Job Application Tracker — AI-enhanced platform that parses job descriptions and generates tailored application recommendations. (github**)**

- Designed microservice architecture with React/TypeScript frontend and Python FastAPI backend, persisting data in PostgreSQL.
- Integrated LLM-driven analysis via REST API to automatically extract key skills from job postings, demonstrating AI-native development.
- Implemented unit and integration tests and CI/CD pipelines on GitHub, ensuring production-grade reliability.

SpotiBot – Personalized Spotify Playlist Generator — Automation tool that creates custom playlists using the Spotify API and scalable data pipelines. (github**)**

- Built Flask backend with PostgreSQL storage to handle high-volume user and track data.
- Created automated data pipelines that process large music libraries, showcasing experience with high-throughput workflows.
- Containerized the application with Docker for consistent deployment across environments.

TECHNICAL SKILLS

languages: Python, TypeScript, JavaScript, SQL, C++, Java

Frameworks & Libararies: React, Next.js, FastAPI, scikit-learn, pandas, TensorFlow, Docker, PostgreSQL

AI/ML Capabilities: Machine learning model development, Natural Language Processing, Large Language Model prompting (Claude, Codex, Cursor), Feature engineering, Predictive analytics, AI prompt engineering

Soft Skills: Agile collaboration, Curiosity-driven research, Proactive problem solving, Entrepreneurial mindset, High-energy teamwork
